PROFESSIONAL SUMMARY

A Computer Science graduate worked on two separate internships, developing and testing production-grade software throughout the full SDLC. I designed, documented and unit tested REST APIs endpoints using Express.js and Flask, integrated front-end, back-end and real-time features into working systems, and got a product from closed beta to a live Play Store launch.

EDUCATION

Presidency University, Bangalore

Oct 2022 - Jun 2026

B.Tech-Computer Science and Engineering (CGPA-7.10)

EXPERIENCE

Irasoft Systems

Jun 2026 - Aug 2026

Software Developer Intern

On-Site

- Developed, tested, and documented REST APIs in Express.js for order tracking and scheduling on We4Nest, working to team coding standards in two-week Agile sprints, resulting in a product that graduated from closed beta to a live Play Store launch.
- Unit tested and debugged APIs endpoints before release, and maintained Postman collections so that other developers could integrate against the services independently.
- Built Gurukul, an end-to-end e-learning platform: MongoDB schemas, Express.js services and a responsive React front end, assembled into a single working system.
- Implemented SFU-based WebRTC video conferencing with WebSocket signalling, allowing for multiple students to share a virtual classroom with no perceptible lag, fully owned and delivered on schedule.

Infosys Springboard

Nov 2025 - Jan 2026

Generative AI Intern

Remote

- I have built an ML pipeline in Python that utilizes weather data to predict wildfires. Both structured and unstructured data were merged into a single training set.
- The model was deployed as a documented Flask REST API, and predictions were validated against a hold-out set before deployment.
- I performed an exploratory data analysis to identify the most important features and acted on feedback from senior staff to improve the final result.

PROJECTS

Fake Account Detection in Social Media [Link](#)

Feb - 2025

- Developed a Python-based anomaly detection system that identifies suspicious social media accounts by analysing behavioural and metadata patterns; tested and deployed the prototype on a Raspberry Pi platform to ensure it operates within the hardware's limitations.
- Improved the detection algorithm through multiple test cycles that fine-tuned the accuracy and reduced false positives.
- Created a data preprocessing pipeline with Pandas and NumPy that cleans and normalizes raw data, shortening the model training time by 20%.

SKILLS

- | | | | |
|--------------|-----------------------------|------------------|-------------|
| • Python | • MongoDB | • Agile | • Github |
| • Sql | • Rest API Design | • Scrum SDLC | • LangChain |
| • JavaScript | • Unit Testing(Jest,PyTest) | • Docker | |
| • Nodejs | • API Docs(Postman,Swagger) | • Github Actions | |

CERTIFICATES

Python 101 for Data Science – IBM Cognitive Class

April -2025

Deloitte Australia Cyber Job Simulation on Forge

Sept - 2026
