SUMMARY

Computer Science graduate with internship experience in software development and applied AI. Built an e-learning platform with live video conferencing and REST APIs at Irasoft System, and an ML pipeline for wildfire risk prediction at Infosys Springboard. Skilled in React, Express.js, MongoDB, and Flask.

EDUCATION

Presidency University, Bangalore

(Oct 2022 - Jun 2026)

B.Tech-Computer Science and Engineering (CGPA-7.10)

TECHNICAL SKILLS

- **Languages:** Java, Python.
- **Frontend:** React.js, Next.js, Tailwind CSS.
- **Backend:** Node.js, Express.js, REST APIs, Flask.
- **Databases:** MongoDB, MySQL
- **Cloud & DevOps:** AWS Basics, Docker, GitHub Actions.
- **AI/ML:** LLM Integration, RAG basics, Prompt Engineering, Vector Databases, Langchain.
- **Version Control:** Git, GitHub

EXPERIENCE

Irasoft Systems

(Jun 2026 - Aug 2026)

Software Developer Intern

On-Site

- Worked on We4Nest (closed beta) to build REST APIs in Express.js for order tracking and scheduling for We4Nest; took the product from closed beta to a live Play Store launch during my internship.
- Gurukul: End-to-end web platform built using Express.js, MongoDB schemas and a responsive React frontend.
- Built WebRTC video conferencing (SFU-based) with WebSocket signaling to allow multiple students to join a virtual classroom without perceptible lag; involved in the most challenging part of the project which involved getting the signaling right.

Infosys Springboard

(Nov 2025 - Jan 2026)

Generative AI Intern

Remote

- Built an ML pipeline in Python (scikit-learn, Pandas) for forecasting wildfire risk based on weather data.
- Processed and combined structured and unstructured weather data sets and trained the model on them.
- Applied the model as a Flask REST API to predict wildfires and performed an EDA to evaluate the importance of each variable in the model.

PROJECTS

ARC AI - AI Assistant

(Sept - 2026)

- Built a desktop AI assistant (React + Electron + Node.js, running Llama 3.1 locally) that takes voice commands to open applications, control media, and perform system-level operations on Windows.
- Enabled OCR-based screen monitoring to detect build errors while coding, reducing the need to manually scroll through logs.
- Implemented continuous listening with wake-word detection for hands-free voice command invocation.
- Used Electron IPC to expose the application to the host OS and securely invoke native Windows operations.

Fake Account Detection in Social Media

(Feb - 2025)

- Created a Python-based system for identifying suspicious social media accounts based on behavioral and metadata patterns.
- Tested and deployed the program on a Raspberry Pi platform as a means of reducing its hardware requirements.
- Improved the detection algorithm several times during the development process in order to improve the accuracy of identifying anomalous accounts without producing false positives.

CERTIFICATES

Deloitte Australia Cyber Job Simulation on Forage

(Sept - 2026)
